SUBJECT: REQUEST TO EXPAND OPERABLE UNIT 2 (OU 2) SURFICIAL SOILS SAMPLING PROGRAM - MFM-007-93

This is a request to expand the area covered in the OU 2 Surficial Soils Disturbance permit to include those new sampling locations as outlined on the map provided by John Jehns of Woodward-Clyde. These samples will be taken according to the sampling procedures outlined in GT.08 found in the EMD Operating Procedures Volume III: Geotechnical, Manual No. 5-21000 OPS-SW. The procedure calls for locating a 10 acre plot and then systematically locating 25 sample locations within the plot. A stainless steel jig is then used to identify the proper dimensions (3"X 3" squares 1/4" deep) of soil to be sampled. The area of the soil disturbance is limited to these squares.

These additional sampling locations are needed to support RFI/RI field investigations as part of the Human Health Risk Assessment (HHRA). The project charge number is 986446. You are authorized to charge up to a total of 8 hours to this account for permit modification/preparation and field oversight. This permit needs to be in place no later than Monday, February 22, 1993. As these studies are on a critical path, your cooperation in expediting this request is greatly appreciated.
